## CONTROL BOXES

**(PRE-DRILLED TO ACCEPT OUR 22MM SWITCHES)**

**MULTI-HOLE CONTROL BOX**

**BASE MOUNT E-STOP SWITCH**

When Moujen introduced our 22mm switch line, there was a great demand for a control box to be used for remote switch requirements. As a result, we then introduced the M22 control boxes. These rugged plastic boxes are available with pre-drilled holes of 1, 2, 3, 4, or 6 hole configurations. There are two standard colors of box; yellow over black base and ivory over black base. Custom colors are available as a special order!

Why is there a need for these boxes you ask? In many applications you may have a machine running a process that is not easily accessible, for various reasons. You may need an emergency “kill” switch, or E-Stop switch, to immediately shut down a process as a result of jamming, overloading, safety issues, etc. The most expedient solution may be to have a remote control box sitting at your station so you have easy access to the switch controls. Another application may be that a machine is so physically large that you want to mount control boxes on all sides of the machine for quick access! There are numerous applications requiring these boxes – on your next application, think of Moujen first!
