

~ MOUJEN MONTHLY ~

The Series “KS” Relay sockets, announced late last year, are beginning to show great success worldwide. The modules are largely compatible with all comparable standards in the market (Finder, Phoenix Contact, Tyco, Curtis, Magnecraft). These low priced relay sockets are DIN rail mountable, or screw mountable, to the control cabinet. They are built ruggedly for the most demanding applications, and incorporate a highly reliable and “proven” screw clamp technology.

Sockets are available for various styles of miniature power relays, miniature switching relays, electronic solid state relays , as well as the traditional octal relays.

There are a variety of accessory items such as relay retaining clips (metal and plastic styles), plastic relay ejectors if necessary, and various marking plates to assist in contact identification.
