M4 SERIES

PRE-WIRED LIMIT SWITCHES

The M4 Series limit switches have been designed to withstand the rugged industrial environments that applications sometimes demand. They can be mounted in areas that our larger limit switches cannot, due to their very small size. This series of product is made with die cast housings and a pre-wired cable with a protection degree of IP67 (dust tight and protected from the effects of immersion).

There are many different actuator head options available – and new to this series is the option for “quick-connect” cables. These M12 cables are oil resistant and allow for quick replacement of the limit switch if required – reducing down time for automation systems.

When your applications needs are for – rugged, compact, industry standard dimensions, multiple head options, long life – consider the Moujen M4 Series products!
