

## ~ *MOUJEN MONTHLY* ~

For a very robust limit switch which can be used in “dirty” environments, consider the Moujen M4 Series of product! These switches have sealed contacts for an ingress protection rating of IP67 (dust tight and protected against the effects of immersion). They are suited for outdoor use as well as heavy industrial manufacturing environments. A wide range of actuator choices are available, and all switches come “pre-cabled” with either a standard 2 meter or optional 3 meter cable. The standard cable (UL and oil resistant type) can be side mounted or mounted horizontally to give maximum installation flexibility. The cable entrance is sealed via potting encapsulate for maximum protection.

### PRODUCT SERIES “M4” PRE-CABLE

For applications that may require changing out the switch in the field, there is also available a “quick connect” version, the cable simply screws onto the switch flange so no cable change is required to fit a new switch in place. Given the many advantages of the M4 product line, and it’s overall high quality, it is still a very cost effective way to resolve a limit switch requirement!
