

~ *MOUJEN MONTHLY* ~

The M6 Series of push-button switches from Moujen conform to the industry standard “16mm panel cut-out.” These switches are suited for electronic applications where exposure to the elements is not a primary concern (although the M6 does carry an impressive IP65 rating – dust tight & resistant to spray by water-jets). Typical applications include electronic systems, control panels, test equipment, and medical instruments.

Moujen’s products come with a variety of lens styles – square, rectangular, mushroom, and round. Additionally, we supply key locking switches, buzzers, and various lever actuators. All of these styles come either illuminated or non-illuminated (LED, Incandescent, or Neon lamps). The M6 comes with a modular contact block which self-locks to the switch actuator. This allows a user, or perhaps a contract manufacturer, to wire the switch contact block at the work station, and then the wired block can be locked to the actuator which is already mounted to the control panel. Ease of use – saves time and money!

The M6 comes with either PC pins or solder terminals. Gold contacts are standard for all switches allowing for positive make-and-break switching in low level logic circuits.
