

~ *MOUJEN MONTHLY* ~

The MEA Series of limit switches are sometimes called our “cheap” limit switches! They offer the complete technical specifications of our more rugged ME Series, at a much lower price. The reason – it has an all plastic enclosure. It is not a metal casting, nor a machined metal body like some of our other limit switches. The intent of making the product from high grade plastic was not to try and make a low cost product, but rather to be able to supply a light weight product. This can be important when the overall weight of the customer’s end product must be controlled, or where shock and vibration are a concern (less mass means less forces applied). In fact, the comparable metal product (ME Series) to our MEA series, will weigh 40% more!

The MEA series has a unique field adjustable head – you can swivel the head through 360 degrees, and adjust the lever actuators to any of eight different positions. This allows for easy and flexible mounting requirements in demanding locations. For ease of repair, if needed, the contact block can be removed and replaced in the field – i.e. little down time. The product is rated for IEC 529 class IP65 – dust tight and protected against water jets.
