

~ *MOUJEN MONTHLY* ~

It is a little known secret, but the first switch product launch made by Moujen way back in 1974 continues to be the most widely used of all our products. The MJ2 Series of snap switches, or commonly called micro type switches, have been used in a wide variety of applications. They are installed in vending machines, dishwashers, printing presses, industrial ovens, elevators, and food processing equipment, to mention a few. There are many reasons why the MJ2 has had this successful track record. The switch series has a reliable long life, high current load (up to 1/4 HP), several agency approvals, and many options in actuator style and contact pressure. In fact, there are over 500 options available for the standard switch units. If you don't see what you are looking for, ask us!

Most recently, the MJ2 became available with additional termination options, including screw terminals, quick-connect terminals, and solder terminals. Our protective rubber boot can be used in dirty environments to cover the contact terminals and enhance the switches performance.

For more information on our complete line of switch products, visit our web site at www.moujenswitch.com or contact Moujen Switch USA 16120 Caputo Dr. Morgan Hill, CA 95037 TEL: 800-532-5526 FAX: 408-778-0654 Send e-mail inquiries to info@moujenswitch.com.
