

*~ MOUJEN MONTHLY ~*

The MV Series of micro switches are used in many control applications where small size, reliability, and low cost are important design considerations. In quantity, these small switches break the \$1.00 price barrier. This in itself is amazing, considering the mechanical life of these switches exceeds 5 million operations! Typical applications are found in both the commercial and industrial sectors – such as, arcade games, coin operated machines, video games, solenoid valves, etc. There are literally thousands of applications requiring either N/O or N/C contacts, both are standard in each switch.

**UL, CSA, CE, CCC, RoHS**

In addition to the many applications possible for this series, there are also numerous actuator styles, contact types, and actuator forces available. Most of these options are “standards”, but special unique application requirements may require custom designed product as well – if you can think it, we can build it! High current switches are available to 20 Amps, and high temperature switches are available to 120 Celsius!
